Ammonium Chloride is used in flux manufacture, as an electrolyte in the manufacture of dry cell batteries, in shampoos, cosmetics, household and personal care formulation, and in the manufacture of chemicals and fertilizers.

**HEALTH HAZARDS**
For normal industrial uses and with good hygienic practices, there are no known hazards with ammonium chloride. The American Conference of Governmental Industrial Hygienists (ACGIH) recommends an 8-hour TLV®-TWA of 10 mg/m³ ammonium chloride fumes in air to prevent irritation of respiratory passages.

**SAFETY PRECAUTIONS**
Wash thoroughly after handling. The use of impervious or rubber gloves and chemical safety goggles are recommended.

**FIRST AID**
In case of eye contact, immediately flush eyes with plenty of water for at least 15 minutes. Call a physician.

Ammonium chloride solution is a clear aqueous solution and presents no unusual handling problems. It should be stored away from strong alkalis or strong oxidants.

Zaclon ships ammonium chloride solution in 55 gallon PE drums, totes, tank trucks, or rail cars. Ammonium chloride is not regulated as a hazardous material by the Department of Transportation in containers of less than 119 gallons. Containers larger than this are regulated as an Environmentally Hazardous Substance Liquid, N.O.S. (Contains Ammonium Chloride).
