Volan®

bonding agent

Coupling Agent and Adhesion Promoter for Composites

\[
\begin{align*}
&C_7H_4O_2Cl_2Cr(III)
\end{align*}
\]

Cr (III) Methacrylate Surface Active Agent

Product Overview

Volan® adhesion promoter is a specialty formulated solution containing unique surface-complexing monomers of Chromium (III) Methacrylate. During application, the active molecules attach to inorganic or polar substrates and orient themselves with polymerizable groups outward permitting reaction with a wide variety of thermosetting resins such as:

- Polyesters
- Epoxies
- Phenolics
- Vinlys
- Acrylics

The ability of Volan® to react to inorganic or polar surfaces provides enhanced adhesion to many substrates such as:

- Glass
- Fiberglass
- Engineering or Carbon fibers
- Silica
- Metals

Chemical and Physical Properties

Physical properties and typical analyses are shown in Tables 1 and 2.

Warning

Volan® can cause eye burns and skin, nose, and throat irritation. Volan® is also a flammable liquid. See “Personal Safety and First Aid” on page 4.
Volan® is completely miscible with water and its performance is not affected by normal water hardness. However, hard or otherwise contaminated water is always suspect if the treating solution is not clear or if neutralization by the recommended procedures results in precipitation of the complex.

Volan® bonding agent begins to polymerize when it is diluted with water and if alkali is added. It is the partly polymerized complex that permits effective bonding between a resin and a hydroxylic surface. The diluted Volan® should be neutralized to a pH of 6.2. Once the solution has been neutralized, no additional pH adjustment should be made, even though the pH can drop as the solution ages and polymerization proceeds. Any precipitated complex due to over-neutralization or mixing with incompatible material should be discarded. Precipitated complex will not produce surfaces that permit effective bonding.

**Suggested Uses**

**Size for Glass Fiber Roving Reinforcement**

The most important use for Volan® is as a finish for glass fiber roving, which is then used as the reinforcement agent in unsaturated polyester resins. Volan® is a key component of the “chrome” size, which is applied by padding on strands at the bushings during glass fiber manufacture. The effectiveness of Volan® with standard polyvinyl acetate binders is related to its compatibility with the emulsion stabilizer system used in the polyvinyl acetate.

Volan® also serves as an anti-static agent. Chopped strand and roving sized by treatment with Volan® combine rapid wetting and good laminate strengths with ease of cutting and low static charge. Processors recognize all these properties as vital to trouble-free processing, particularly with gun rovings.

**Coatings on Silica Microspheres or Fillers**

Volan® bonding agent can be used as both an adhesion promoter and anti-static surface coating on silica microspheres. The presence of a Volan® coating increases the bonding of the microspheres or filler to the polymer substrate, and also gives easy-flowing handling characteristics.

**Finish for Glass Fabric Reinforcement**

Volan® is usually applied to glass fabric by a treating and washing step known throughout the industry as the “A” finish. This finish was qualified under military specification MIL-F-9118A.

Typical laminate performance of the “A” finish on 181-type glass fabric is shown in Tables 3 and 4. Volan® may be applied to any heat-cleaned glass fabric.

**Preparation of Treating Solutions of Volan®**

1. Make a solution of 1.5 to 2.0% by weight of Volan® in water.
2. Neutralize diluted Volan® to a pH of 6.0-6.5 by adding 2.2 parts of 1% NH₃ solution for each part of Volan® commodity.

**Application of Glass Cloth (“A” Type Finish)**

1. Dip fabric to a loading of 0.50-0.80% commodity or 0.03-0.05% chromium on dry basis weight of fabric. This requires a wet add-on of approximately 40%.
2. Dry and heat-cure (dryness, with a surface temperature of about 120°C [248°F]).
3. Wash the fabric in water by immersion, spraying, or both.
4. Dry again. The glass temperature must not exceed 120°C (248°F).

**Coupling Agent on Pigments and Mica Fillers**

When used as a coupling agent on pigments or fillers, Volan® bonding agent promotes polymer reinforcement by activating the filler surfaces. Any tendency for the mica or filler not to adhere to the polymer resin is eliminated by making the different surfaces compatible. Rapid wetting of the pigment and subsequent enhancement of the film or

* Shell Chemical Company
** Dixie Chemical

Laminate strengths are recognized benefits of using fillers coated with Volan®.

**Metal Surface Preparation and Bonding**

In critical bonding applications such as honeycomb-to-metal, Volan® may offer one-step degreasing, cleaning, and surface activation. A solution of Volan® in acetone or other solvent can serve as the primary grease or film remover, while depositing a complex surface monomer for polyimide or epoxy co-bonding.

**Adhesion Promoter for Inks**

As a component or activating agent for printing inks, Volan® aids in the cure of polymer resins used in ink formulations, and also promotes adhesion to paper and other substrates containing calcium carbonate or titanium dioxide.

**Storage and Handling**

Volan® is OSHA Class 1B flammable mixtures with a Tag Closed Cup flash point of 2°C (36°F). Keep container closed and away from heat, sparks, and open flames. Use with adequate ventilation and ground all handling equipment. Electrical equipment in the area should be explosion-proof. OSHA regulations for flammable and combustible liquids are contained in Title 29 of the Code of Federal Regulations (CFR) Section 1910.106 and must be followed when handling Volan®.

Store Volan® in cool areas out of direct sunlight. Storage at temperatures above 43°C (109°F) for extended periods may cause degradation of the complex.

Solutions of Volan® are corrosive. Glass, Monel, polyethylene, and polyvinyl chloride are acceptable materials of construction.

In case of spills or leaks, eliminate all sources of ignition and evacuate the area until the vapors have dispersed. Wear full chemical-proof suit with air supply. Soak up with sand, earth, or other noncombustible absorbent material and dispose of in covered metal containers. Obey federal, state, and local regulations for reporting releases. The CERCLA reportable quantity for generic ignitables is 45 kg (100 lb).

Volan® waste material may be an RCRA hazardous waste due to its generic flammability and toxicity characteristics. Dispose of Volan® in accordance with federal, state and local regulations. If approved, Volan® may be incinerated or drained to a chemical sewer leading to a waste treatment plan.
Personal Safety and First Aid

Health Hazards
The chromium in Volan® is completely in the trivalent state. Unlike the hexavalent form, Cr+6, which can be toxic, the trivalent form, Cr+3, is an essential trace mineral.

Volan® can cause eye burns and irritation of the skin, nose, and throat. No skin sensitization was observed in animal tests.

The U.S. Department of Labor (OSHA) has ruled that an employee’s exposure to the following components of Volan® shall not exceed the indicated airborne exposure limits (time weighted average for 8-hour work shift of a 40-hour week); see the MSDS:

<table>
<thead>

</tr>
</tbody>
</table>

Safety Precautions
Do not get in eyes. Avoid contact with skin and clothing and avoid breathing vapor or mist. Use with sufficient ventilation to keep employee exposures below recommended exposure limits; see the MSDS. Wash thoroughly after handling. Wear chemical splash goggles and acid-proof rubber gloves when handling. Wear additional protective equipment when appropriate.

First Aid
In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Call a physician. Wash clothing before reuse.

If large amounts are inhaled, remove the person to fresh air. If the person is not breathing, give artificial respiration. If the person’s breathing is difficult, give oxygen. Call a physician. If Volan® is swallowed, do not induce vomiting. Give two glasses of water or activated charcoal slurry. Call a physician.

Shipping Containers
Volan® Bonding Agent is available in 55-gal (208 L) plastic-lined non-returnable steel drums. The Volan® drum contains 450 lb (204 kg) net.

Volan® Bonding Agent is regulated as Hazardous Materials by the Department of Transportation (DOT). The DOT proper shipping name for Volan® is FLAMMABLE LIQUID, N.O.S. and the DOT Hazardous Class is Flammable Liquid (49 CFR 172.101, Hazardous Materials Table). The United Nations identification number is UN 1993.
