**"VOLAN" BONDING AGENTS**  
9720CR  
Revised 11-OCT-2008

---

**CHEMICAL PRODUCT/COMPANY IDENTIFICATION**

---

**Material Identification**

"VOLAN" is a registered trademark of DuPont.

Corporate MSDS Number : DU004667  
Formula : C₄H₆O₃C₁₄Cr₂  
Grade "VOLAN"; "VOLAN" L

---

**Company Identification**

MANUFACTURER/DISTRIBUTOR  
Zaclon LLC  
2981 Independence Road  
Cleveland, Ohio 44115

PHONE NUMBERS  
Product Information : 1-800-356-7327  
Transport Emergency : CHEMTREC: 1-800-424-9300

* Disclosure as a toxic chemical is required under Section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 and 40 CFR part 372.

Components (Remarks)

**17-21 (Grade dependent).**

**In equilibrium with isopropanol and the chloride ion.**

Note: A small amount of the chromium chloride is hydrolyzed to give hydrochloric acid. See pH in the Physical Data section.
HAZARDS IDENTIFICATION

Potential Health Effects

Causes eye burns. Causes irritation of the skin, nose and throat.

HUMAN HEALTH EFFECTS:

Skin contact may cause skin irritation with discomfort or rash. There are rare inconclusive reports of human sensitization from skin contact with Isopropyl Alcohol. Repeated and/or prolonged exposure may cause: Defatting of the skin with itching, redness or rash.

Eye contact may cause eye corrosion with corneal or conjunctival ulceration, pain or blurred vision.

Exposure to the product mists or vapors may cause irritation of the eyes and skin.

Inhalation may cause irritation of the respiratory tract with coughing and discomfort; or temporary central nervous system depression with anaesthetic effects such as dizziness, headache, confusion, incoordination, drowsiness, and loss of consciousness.

Ingestion may cause irritation of the digestive tract with stomach pain, heartburn, nausea, vomiting or diarrhea; or temporary central nervous system depression; however there may be no symptoms at all.

Inhalation, ingestion, or skin contact to isopropyl alcohol may cause nonspecific effects such as headache, nausea and weakness, flushing of the face, or low blood pressure.

Isopropyl chloride has been associated with abnormal liver and kidney function and temporary alteration of the heart's electrical activity with irregular pulse, palpitations, or inadequate circulation.

Carcinogenicity Information

None of the components present in this material at concentrations equal to or greater than 0.19 are listed by IARC, NTP, OSHA or ACGIH as a carcinogen.
FIRST AID MEASURES

First Aid

INHALATION
If large amounts are inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Call a physician.

EYE CONTACT
In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Call a physician.

SKIN CONTACT
Wash skin with soap and plenty of water while removing contaminated clothing. Wash clothing before reuse.

INGESTION
If swallowed, do not induce vomiting. Give two glasses of water or activated charcoal slurry. Call a physician
Never give anything by mouth to an unconscious person.

Notes to Physicians
To prepare activated charcoal slurry, suspend 50 gm of activated charcoal in 400 mL of water in a bottle and shake well. Administer 5 mL/kg of body weight, or 350 mL for an average adult.

FIRE FIGHTING MEASURES

Flammable Properties

Flash Point 2 C (36 F)
Method TCC
Flammable limits in Air, by Volume
LEL 2
UEL 12
Autoignition >399 C (>750
Autodecomposition Not available

Actual Autoignition Temperatures (AIT's) can be affected by the concentration of vapors and oxygen, vapor/air contact time, pressure, volume, catalytic impurities, etc. Process conditions should be analyzed to determine if the AIT may be higher or lower.

Fire and Explosion Hazards:

OSHA Class 1B Flammable Liquid. Follow appropriate National
Extinguishing Media

Water, Foam, Dry Chemical, CO2.

Fire Fighting Instructions

Evacuate personnel to a safe area. Cool tank/container with water spray.

ACCIDENTAL RELEASE MEASURES

Safeguards (Personnel)

NOTE: Review FIRE FIGHTING MEASURES and HANDLING (PERSONNEL) sections before proceeding with clean-up. Use appropriate PERSONAL PROTECTIVE EQUIPMENT during clean-up.

Evacuate personnel, thoroughly ventilate area, use self-contained breathing apparatus.

Initial Containment

Remove source of heat, sparks, flame, impact, friction or electricity.

Spill Clean Up

Discarded material is a RCRA Hazardous Waste.

Accidental Release Measures

Wear protective clothing. Dike spill. Soak up with sand, earth, or other non-combustible material and dispose of in covered metal containers. Prevent liquid from entering sewers, waterways, or low areas. After bulk removal, flush spill area with plenty of water.

HANDLING AND STORAGE

Handling (Personnel)

Do not get in eyes. Avoid breathing vapors or mist. Avoid contact with skin. Avoid contact with clothing. Wash thoroughly after handling.

Use with adequate ventilation.

Storage

Keep away from heat, sparks, and flame. Keep containers tightly closed and in an upright position. Do not store or mix with oxidizing agents.
EXPOSURE CONTROLS/PERSONAL PROTECTION

Engineering Controls

Good general ventilation should be provided to keep component concentrations below the recommended exposure limits and avoid flammable mixtures with air. Use explosion-proof motors, electrical fittings, and nonsparking tools and equipment. Containers should be grounded.

Personal Protective Equipment

Have available and wear as appropriate to prevent eye or skin contact: coverall chemical splash goggles, safety spectacles (side shields preferred), and neoprene, polyvinylchloride, or nitrile gloves. Wear flame resistant clothing. If direct inhalation exposure is likely, wear NIOSH approved respiratory protection.

* AEL is DuPont's Acceptable Exposure Limit. Where governmentally imposed occupational exposure limits which are lower than the AEL are in effect, such limits shall take precedence.
PHYSICAL AND CHEMICAL PROPERTIES

Physical Data

Boiling Point 77-79 C (171-174 F) @ 760 mm Hg
Vapor Density -2 (Air = 1)
Evaporation Rate (Butyl Acetate = 1)
Greater than 1
Solubility in Water 100 WT9 in 19 water solution
pH -3
Odor Alcoholic
Form Liquid
Color Blue-green
Specific Gravity "VOLAN" = 1.02; "VOLAN" L = 0.95

STABILITY AND REACTIVITY

Chemical Stability

Stable.

Incompatibility with Other Materials

Incompatible with oxidizing agents.

Decomposition

Decomposes with heat; solvent vapors and gaseous hydrogen chloride will be emitted.

Polymerization

Polymerization will not occur.

TOXICOLOGICAL INFORMATION

Animal Data

"VOLAN" L Bonding Agent:
Oral LD50: 6746 mg/kg in rats

Isopropyl Alcohol:
Oral LD50: 4,700 mg/kg in rats
Inhalation 4 hour LC50: 16,000 ppm in rats
Skin Absorption LD50: 12,900 mg/kg in rabbits

Acetone:
Oral LD50, rat: 9,750 mg/kg
Inhalation 4 hour, LC50, rat: 31,983 ppm
These products are eye corrosives and are skin irritants but not skin sensitizers in animals. Toxic effects in described in animals from single ingestion exposures include lacrimation, weakness, lethargy and slight weight loss. Although some Chromium Compounds (Cr VI) have demonstrated carcinogenic activity in animals, Chromium III Compounds have not.

The effects in animals from single ingestion exposure to ISOPROPYL ALCOHOL at near lethal doses include histopathological changes of the stomach, lungs, kidneys, incoordination, lethargy, gastrointestinal tract irritation, inactivity or anaesthesia. Long-term ingestion exposure caused incoordination, lethargy, and reduced weight gain. The effects in animals from single exposure by inhalation include inactivity or anaesthesia, histopathological changes of the nasal cavity, and auditory canal. Repeated inhalation exposure caused narcosis, incoordination, and degeneration of the liver. No adequate animal data are available to define the carcinogenic potential of isopropyl alcohol. Animal data show developmental effects only at exposure levels of isopropyl alcohol producing other toxic effects in the adult animal; reproductive data on rats show no change in reproductive performance. Tests have shown that isopropyl alcohol does not cause genetic damage in bacterial or mammalian cell cultures, or in animals.

Repeated dermal exposure of animals to ACETONE caused dry skin and cataracts. Long-term dermal exposure caused no significant toxicological effects.

Repeated ingestion exposure to high doses of ACETONE caused kidney injury, reduced weight gain, and liver, hematological and testicular effects.

Single and repeated exposure by inhalation to high doses caused central nervous system depression, and decreased motor activity. Repeated exposures to higher concentrations caused incoordination and reduced weight gain.

In animal testing ACETONE has not caused carcinogenicity. Limited data on the exposure of pregnant rats to ACETONE show developmental toxicity only at exposure levels producing other toxic effects in the adult animal. Limited data on the exposure of pregnant mice to ACETONE show a reduction of fetal body weight and an increase in the incidence of late resorptions.

The NOEL (No-Observed-Effect-Level) for developmental toxicity in the rat and mouse study was 2200 ppm. Limited data on the exposure of rats and mice to ACETONE show reproductive toxicity only at exposure levels producing
other toxic effects in the adult animal. ACETONE does not cause genetic damage in bacterial cells. Test in mammalian cell cultures have been both positive and negative. Testing in yeast has also produced positive results.
